Answer:

Explanation:

See solution below.

Explanation

Step 1: In the Azure portal, click All services. In the list of resources, type Storage Accounts. As you begin typing, the list filters based on your input. Select Storage Accounts.

Step 2: On the Storage Accounts window that appears, choose Add.

Step 3: Select the subscription in which to create the storage account.

Step 4: Under the Resource group field, select corpdatalog7523690.

Step 5: Enter a name for your storage account: corpdata7523690n1

Step 6: For Account kind select: General-purpose v2 accounts (recommended for most scenarios) General-purpose v2 accounts is recommended for most scenarios. . General-purpose v2 accounts deliver the lowest per-gigabyte capacity prices for Azure

Storage, as well as industry-competitive transaction prices.
Step 7: For replication select: Read-access geo-redundant storage (RA-GRS) Read-access geo-redundant storage (RA-GRS) maximizes availability for your storage account. RA-GRS provides read-only access to the data in the secondary location, in addition to geo-replication across two regions.

NEW QUESTION: 2

While teaching in a virtual classroom, the trainer uses which of the following to mitigate disruptions?

- A.** Create a discussion forum for the trainer to use with the learners.
- B.** Use private chat rooms with trainer monitoring.
- C.** Force particular disagreements to be directed to the entire group.
- D.** Keep all interactions public within the virtual classroom.

Answer: B

Explanation:

Explanation/Reference:

Explanation:

NEW QUESTION: 3

You have a datacenter that contains six servers. Each server has the Hyper-V server role installed and runs Windows Server 2012 R2. The servers are configured as shown in the following table.

Host4 and Host5 are part of a cluster named Cluster1. Cluster1 hosts a virtual machine named VM1.

You need to move VM1 to another Hyper-V host. The solution must minimize the downtime of VM1.

To which server and by which method should you move VM1?

- A.** To Host6 by using a storage migration
- B.** To Host2 by using a live migration
- C.** To Host1 by using a quick migration
- D.** To Host3 by using a storage migration

Answer: D

Explanation:

With Hyper-V live migration, you can move running VMs from one Hyper-V physical host to another without any disruption of service or perceived downtime.

Host3 has an Intel processor, as does Host4 and Host5 in Cluster1, so the migration will

work fine.

Incorrect:

Not B, not C: The migration of a virtual machine between physical computers is only supported on computers that have the same processor steppings or are from the same

vendor. Therefore you cannot move a virtual machine from a Hyper-V host on an Intel-based server to a Hyper-V Host on an AMD-based server.

Not D: Quick Migration saves, moves and restores VMs, which results in some downtime.
