- A. PFX
- B. CER
- C. PEM
- D. DER

Answer: C

NEW QUESTION: 3

- A. Option A
- B. Option C
- C. Option D
- D. Option B

Answer: D

Explanation:

The DHCP Server role in Windows Server 2012 introduces a new feature that allows you to create IPv4 policies that specify custom IP address and option assignments for DHCP clients based on a set of conditions.

The policy based assignment (PBA) feature allows you to group DHCP clients by specific attributes based on fields contained in the DHCP client request packet. PBA enables targeted administration and greater control of the configuration parameters delivered to network devices with DHCP.

Example: In a subnet which has a mix of wired and mobile computers, you might want to assign a shorter, 4 hour lease duration to mobile computers and longer, 4 day lease duration to wired computers.

Incorrect:

not A: DHCP filtering provides security by filtering untrusted DHCP messages. An untrusted message is a message that is received from outside the network or firewall, and that can cause traffic attacks within network.
