NEW QUESTION: 3

Which of the following statements regarding per-platform label space are true? Choose two answers.

- A.** A single label may be assigned to an FEC and used across all interfaces of the same router.
- B.** It is only valid when the LDP peers are directly connected over an interface, and the label is only going to be used for traffic sent over that interface.
- C.** A separate label is used for each interface that the FEC is advertised on.
- D.** It uses fewer label resources than a per-interface label space.
- E.** It uses more label resources than a per-interface label space.
- F.** It is typically used when the device has ATM or Frame Relay interfaces.

Answer: A,D

NEW QUESTION: 4

Amazon DynamoDB is a NoSQL database service that provides fast and predictable performance with consistently low latency. It is a fully managed service that scales automatically to handle any workload. It is designed for high availability and durability, with data replicated across multiple Availability Zones in a Region. Amazon DynamoDB is a key-value and document database that combines the performance and scalability of key-value stores with the flexibility of a document database. It is a fully managed service that scales automatically to handle any workload. It is designed for high availability and durability, with data replicated across multiple Availability Zones in a Region. Amazon DynamoDB is a key-value and document database that combines the performance and scalability of key-value stores with the flexibility of a document database.

A. Amazon DynamoDB Streams is a fully managed service that provides a near real-time view of all insert, update, and delete operations performed on your Amazon DynamoDB table. It is a fully managed service that provides a near real-time view of all insert, update, and delete operations performed on your Amazon DynamoDB table.

B. Amazon DynamoDB is a fully managed service that provides fast and predictable performance with consistently low latency. It is a fully managed service that scales automatically to handle any workload. It is designed for high availability and durability, with data replicated across multiple Availability Zones in a Region. Amazon DynamoDB is a key-value and document database that combines the performance and scalability of key-value stores with the flexibility of a document database.
