- A. vPC is not supported on the Ethernet ports.
- B. The FCoE or Fibre Channel port allocations must be contiguous on the 6200.
- C. 10-G Fibre Channel ports only use SFP+ interfaces.
- D. Direct FC connections are not supported to Cisco MDS switches

Answer: B

Explanation:

When you configure the links between the Cisco UCS 2200 Series FEX and a Cisco UCS

6200 series fabric interconnect in fabric port channel mode, the available VIF namespace on the adapter varies depending on where the FEX uplinks are connected to the fabric interconnect ports.

Inside the 6248 fabric interconnect there are six sets of eight contiguous ports, with each set of ports managed by a single chip. When uplinks are connected such that all of the uplinks from an FEX are connected to a set of ports managed by a single chip, Cisco UCS

Manager maximizes the number of VIFs used in service profiles deployed on the blades in the chassis. If uplink connections from an IOM are distributed across ports managed by separate chips, the VIF count is decreased.
