recommend an AWS data store options for indexed data. The data processing engine will generate and input more than 64 TB of processed data every day, with item sizes reaching up to 300 KB. - D. Amazon S3

Answer: C

Explanation:

Explanation

"a database that requires minimal effort to scale with a growing dataset size" rather than because index data is NoSQL (in my opinion). "Unlike RDS, DynamoDB offers push button scaling, meaning you can scale your DB on the fly, without any down time and it can be automated". If anything, SQL is more of indexing DB than DynamoDB.
