You have an Azure Machine Learning experiment. You need to validate that the experiment meets GDPR regulation requirements and stores documentation about the experiment. What should you use?

- A. Azure Security Center
- B. an Azure Log Analytics workspace
- C. Azure Table storage
- D. Compliance Manager

Answer: D

Explanation:

Explanation

Compliance Manager for Azure helps you assess and manage GDPR compliance. Compliance Manager is a free, Microsoft cloud services solution designed to help organizations meet complex compliance obligations, including the GDPR, ISO 27001, ISO 27018, and NIST 800-53. Generally available today for Azure customers, the Compliance Manager GDPR dashboard enables you to assign, track, and record your GDPR compliance activities so you can collaborate across teams and manage your documents for creating audit reports more easily.

NEW QUESTION: 4

You want to deploy Oracle Solaris 11 with the Automated

Installer (AI). You need to make sure that your server and network meet the requirements for using AI.

Identify two requirements for using AI.

A. If two client machines have different architectures and need to be installed with the same version of the Oracle Solaris 11 OS, then you should create two AI manifests and a single install service.

B. You should set up DHCP. The DHCP server and AI install server can be the same machine or two different machines.

C. The minimum requirement to operate as an AI install server is 1 GB of memory.

D. You can create only one manifest per install service. If you need more than one manifest, you should create multiple install services.

Answer: A,B

Explanation:

A: An automated installation of a client over the network consists of the following high-level steps:

Step 1. The client system boots over the network and gets its network configuration and the location of the install server from the DHCP server.

Step 2: The install server provides a boot image to the client. Etc.

D: If two client machines need to be installed with the same version of the Oracle Solaris

11 OS but need to be installed differently in other ways, then create two AI manifests for the AI install service. The different AI manifests can specify different packages to install or a different slice as the install target, for example.
