NEW QUESTION: 1

HOTSPOT

You need to implement Appl.

How should you configure the locations? To answer, select the appropriate option from each list in the answer area.

Answer:

Explanation:

This should be Cluster3 and use CSV on the Hyper-V Host.

Appl must support dynamic quorum which is a 2012R2 feature.

Cluster1 is again 2012.

Answer: A,C

Explanation:

Every Azure AD directory comes with an initial domain name in the form of domainname.onmicrosoft.com. The initial domain name cannot be changed or deleted, but you can add your corporate domain name to Azure AD as well. For example, your organization probably has other domain names used to do business and users who sign in using your corporate domain name. Adding custom domain names to Azure AD allows you to assign user names in the directory that are familiar to your users, such as '[\[email protected\]](#)' instead of '[\[email protected\]](#)name.onmicrosoft.com'.

Scenario:

Network Infrastructure: Each office has a local data center that contains all the servers for that office. Each office has a dedicated connection to the Internet.

Humongous Insurance has a single-domain Active Directory forest named humongousinsurance.com

Planned Azure AD Infrastructure: The on-premises Active Directory domain will be synchronized to Azure AD.

NEW QUESTION: 3

Steve is considering automating some tasks with IBM WebSphere Portal. Which of the following is a reason why the scripting interface would be a good solution instead of using the administration portlets?

- A.** The script can be used on an environment even when the administration portlets are blocked.
- B.** Writing the script requires a development environment which Steve's developers already have.
- C.** He can execute the script while WebSphere Portal is stopped.
- D.** The scripts can be run by anyone with a web browser, even operations.

Answer: A
