NEW QUESTION: 1

Which three choices are BGP Extended communities used in MPLS-VPN deployment? (Choose three).

- A. Domain Identifier
- B. Route-Target
- C. Route-Distinguisher
- D. Site of Origin S00

Answer: A,B,D

Explanation:

BGP Extended Communities for OSPF PE/CE routing:

A Domain Identifier (Domain ID) is defined as BGP Extended Community which is carried with VPNv4 routes between PE routers. This Domain ID is used to identify the OSPF instance from which it was redistributed into BGP.

NEW QUESTION: 2

What is NOT true with pre shared key authentication within IKE / IPsec protocol?

- A. IKE builds upon the Oakley protocol and the ISAKMP protocol.
- B. IKE is used to setup Security Associations
- C. Pre shared key authentication is normally based on simple passwords
- D. Needs a Public Key Infrastructure (PKI) to work

Answer: D

Explanation:

Internet Key Exchange (IKE or IKEv2) is the protocol used to set up a security association (SA) in the IPsec protocol suite. IKE builds upon the Oakley protocol and ISAKMP. IKE uses X.509 certificates for authentication which are either pre-shared or distributed using DNS (preferably with DNSSEC) and a Diffie-Hellman key exchange to set up a shared session secret from which cryptographic keys are derived.

Internet Key Exchange (IKE) Internet key exchange allows communicating partners to prove their identity to each other and establish a secure communication channel, and is applied as an authentication component of IPsec.

IKE uses two phases:

Phase 1: In this phase, the partners authenticate with each other, using one of the following:

Shared Secret: A key that is exchanged by humans via telephone, fax, encrypted e-mail, etc.

Public Key Encryption: Digital certificates are exchanged.

Revised mode of Public Key Encryption: To reduce the overhead of public key encryption, a nonce (a Cryptographic function that refers to a number or bit string used only once, in security engineering) is encrypted with the communicating partner's

public key, and the peer's identity is encrypted with symmetric encryption using the nonce as the key. Next, IKE establishes a temporary security association and secure tunnel to protect the rest of the key exchange. Phase 2: The peers' security associations are established, using the secure tunnel and temporary SA created at the end of phase 1. NEW QUESTION: 3

Which of the following offers advantages such as the ability to use stronger passwords, easier password administration, one set of credential, and faster resource access?

- A. Single Sign-On (SSO)
- B. Public Key Infrastructure (PKI)
- C. Symmetric Ciphers
- D. Smart cards

Answer: A

Explanation:

Explanation/Reference:

The advantages of SSO include having the ability to use stronger passwords, easier administration as far as changing or deleting the passwords, minimize the risks of orphan accounts, and requiring less time to access resources.
