NEW QUESTION: 2

You are a database administrator for Contoso, LTD, You configure a Microsoft SQL Server failover with four nodes by using Windows Server 2012 R2 Datacenter Edition and SQL Server 2016 Enterprise edition.

A server in the datacenter needs to be replaced. The server is part of the SQL Server Failover Instance (FCI).

You need to remove the FCI node for the server that will be replaced.

What should you do?

- A.** Evict the node from Failover Cluster Manager.
- B.** Remove the shared storage from Failover Cluster Manager.
- C.** Run the Remove-ClusterResource Windows PowerShell cmdlet.
- D.** Run the Remove-cluster Windows PowerShell cmdlet.

Answer: A

Recover from an irreparable failure

Use the following steps to recover from an irreparable failure.

The failure could be caused, for example, by the failure of a disk controller or the operating system. In this case, failure is caused by hardware failure in Node 1 of a two-node cluster.

* After Node 1 fails, the SQL Server FCI fails over to Node 2.

* Evict Node 1 from the FCI. To do this, from Node 2, open the Failover Cluster Manager snap-in, right-click Node1, click Move Actions, and then click Evict Node.

* Verify that Node 1 has been evicted from the cluster definition.

* Install new hardware to replace the failed hardware in Node 1.

* Using the Failover Cluster Manager snap-in, add Node 1 to the existing cluster. For more information, see Before Installing Failover Clustering.

* Ensure that the administrator accounts are the same on all cluster nodes.

* Run SQL Server Setup to add Node 1 to the FCI. For more information, see Add or Remove Nodes in a SQL Server Failover Cluster (Setup).

NEW QUESTION: 3

You migrate SAP ERP Central Component (SAP ECC) production and non-production landscapes to Azure.

You are licensed for SAP Landscape Management (LaMa).

You need to refresh from the production landscape to the non-production landscape.

Which four actions should you perform in sequence? To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.

Answer:

Explanation:

Explanation

Step 1: From the Azure portal, create a service principal
The Azure connector can use a Service Principal to authorize against Microsoft Azure. Follow these steps to create a Service Principal for SAP Landscape Management (LaMa).

Step 2: Add permissions to the service principal

The Service Principal does not have permissions to access your Azure resources by default. You need to give the Service Principal permissions to access them.

Step 3: From the Cloud Managers tab in LaMa, add an adapter
Create a new connector in SAP LaMa

Open the SAP LaMa website and navigate to Infrastructure. Go to tab Cloud Managers and click on Add.

Select the Microsoft Azure Cloud Adapter

Step 4: Install and configure LaMA on an SAP NetWeaver instance
Provision a new adaptive SAP system

You can manually deploy a new virtual machine or use one of the Azure templates in the quickstart repository.

It contains templates for SAP NetWeaver ASCS, SAP NetWeaver application servers, and the database. You can also use these templates to provision new hosts as part of a system copy/clone etc.

Note: To support customers on their journey into a cloud model (hybrid or entirely public cloud), SAP and Microsoft partnered to create an adapter that integrates the SAP management capabilities of LaMa with the IaaS advantages of Microsoft Azure.
