**NEW QUESTION: 1**

Refer to the exhibit.

The network shown in the diagram is experiencing connectivity problems. Which of the following will correct the problems?  
(Choose two.)

- A. Configure the gateway on Host A as 10.1.1.1.
- B. Configure the IP address of Host B as 10.1.2.2.
- C. Configure the gateway on Host B as 10.1.2.254.
- D. Configure
- E. Configure the masks on both hosts to be 255.255.255.240.
- F. Configure the IP address of Host A as 10.1.2.2.

**Answer: B,C**

Explanation:

The switch 1 is configured with two VLANs: VLAN1 and VLAN2. The IP information of member Host A in VLAN1 is as follows:

Address : 10.1.1.126

Mask : 255.255.255.0

Gateway : 10.1.1.254

The IP information of member Host B in VLAN2 is as follows:

Address : 10.1.1.12

Mask : 255.255.255.0

Gateway : 10.1.1.254

The configuration of sub-interface on router 2 is as follows:

Fa0/0.1 -- 10.1.1.254/24 VLAN1

Fa0/0.2 -- 10.1.2.254/24 VLAN2

It is obvious that the configurations of the gateways of members in VLAN2 and the associated network segments are wrong. The layer3 addressing information of Host B should be modified as follows:

Address : 10.1.2.X  
Mask : 255.255.255.0

Some of the best practices for Cloudformation are

\* Created Nested stacks

As your infrastructure grows, common patterns can emerge in which you declare the same components in each of your templates. You can separate out these common components and create dedicated templates for them.

That way, you can mix and match different templates but use nested stacks to create a single, unified stack.

Nested stacks are stacks that create other stacks. To create nested stacks, use the `AWS::CloudFormation::StackResource` in your template to reference other templates.

\* Reuse Templates

After you have your stacks and resources set up, you can reuse your templates to replicate your infrastructure in multiple environments. For example, you can create environments for development, testing, and production so that you can test changes before implementing them into production. To make templates reusable, use the parameters, mappings, and conditions sections so that you can customize your stacks when you create them.

For example, for your development environments, you can specify a lower-cost instance type compared to your production environment, but all other configurations and settings remain the same. For more information on Cloudformation best practises, please visit the below URL:
